

Azure and Office 365 Security Monitoring, Detection and Response Services

Proficio's Security Operations Center (SOC) as a Service provides managed detection and response to cyber attacks and incidents targeting your Azure and Office 365 resources. Dedicated security analysts and engineers actively monitor for suspicious cyber activity 24x7.

Our SOC's, strategically placed in North America, Asia and Europe, deliver active defense incident response to contain or remediate attacks, compromises and security violations on your Azure or Office 365 resources.

Security and Cyber Threat Visibility

Proficio's SOC as a service provides a unified view of security across your Azure cloud and on-premise enterprise resources. It collects security data and performs advanced threat analysis in our cloud SIEM with hundreds of built-in assessments, threat intelligence and use cases for Azure and Azure partner solutions like firewalls, intrusion detection and other devices.

Quick Facts

- Proficio's SOC as a Service provides 24x7 managed detection of threats to Azure and Office 365 resources.
- Get a clearer picture of your Azure and Cloud 365 security landscape.
- Contain, remediate and respond to security violations on your Azure and Office 365 solutions.

Who is Monitoring Your Azure and Office 365 Security?

Even the best-tuned SIEM will only produce accurate alerts about half of the time. The remaining balance of suspicious indicators of attack or compromise require manual review by a qualified security analyst to eliminate false positives, validate truly actionable incidents and enhance notifications with threat containment recommendations.

Proficio's SOC as a Service provides around-the-clock cybersecurity analysts to add valuable context on why a detected threat is actionable and recommend what to do about the threat to contain the incident. Failing to properly respond to an incoming threat can lead to a security breach, damage to a company's brand and the expense of restoring the secure environment.

Comparison: Azure Security Center and Proficio SOC

	AZURE SECURITY CENTER	PROFICIO SOC SERVICES
Central Log Collection for Azure and Partner log sources	✓	✓
Machine (SIEM) Threat Analysis w/Threat Intelligence Security	✓	✓
SOC Analysts Monitoring, Investigating, Validating, Alerting and On-Call 24x7		✓
Active Threat Hunting		✓
Active Defense Automated and Orchestrated Response & Remediation		✓
Managed Services for Firewalls, IDS/IPS, and WAF		✓

Azure Components Monitored

Proficio's SOC analysts monitor and analyze logs from the following Azure components:

- Active Directory
- Office 365
- Sharepoint
- SQL
- Windows and Linux OS
- Web Server
- Anti-Virus Software
- Anti-Malware Software
- Firewalls, IDS and WAF

Proficio's Security Operations Centers are strategically placed around the world and staffed 24x7 by expert security analysts to supplement Azure's Security Center and provide more complete protection from emerging threats.

Working with Proficio to supplement Azure and Azure Security Center provides the most comprehensive security protection for enterprises.

About Proficio

Proficio is a world-class managed security services provider (MSSP) delivering managed detection and response, 24x7 monitoring and alerting, and custom cybersolutions to our clients globally.
