

VULNERABILITY LIFECYCLE MANAGEMENT: PRIORITIZE & MEASURE VULNERABILITIES BASED ON TRUE RISK

Proficio's Vulnerability Life-cycle Management as a Service (VLMaaS) is a way to prioritize your most critical vulnerabilities and report on risks to your stakeholders. VLMaaS is a managed service and cloud application that manages the lifecycle of vulnerabilities in your enterprise from discovery through risk profiling and remediation.

Each asset in your environment could have hundreds of potential vulnerabilities. If you consider the number of different assets your organization has, that quickly amounts to thousands or even millions of potential vulnerabilities across your entire enterprise creating a big data problem for you to manage.

Our VLMaaS services enable organizations to proactively protect their data and IT assets without the cost of software or hardware, or hiring additional in-house security or risk management experts.

PROFICIO VLMaaS SERVICES PROVIDES:

- Vulnerability Management Policy, Standard & Process
- VLMaaS Program Provisioning and Process Setup
- Threat Intelligence Feeds, Correlated to Vulnerabilities with Prioritization
- Business Context & Asset Attribution
- Vulnerability Remediation Triage and Ticket Distribution
- Monthly Review Meetings
- Portal and SaaS Powered by Kenna Security

See the Complete Picture

Your organization is a complex environment, with many different devices – all that carry unique risks and vulnerability. Traditional scanning technologies can help to find and track vulnerabilities on these devices, but then turnaround and present large amounts of data for your security team to sort through, making it impossible to prioritize remediation efforts. Proficio's VLMaaS saves organization's time and money by correlating real-time threat intelligence and business context to each asset identified by your vulnerability scanners. This allows companies to quickly and efficiently prioritize patch remediation efforts. With our Risk Meter Dashboard, you will have a comprehensive view into your risk environment, including priorities and real-world threats, so you always know where your vulnerabilities lie and what compliance risks could be present.

Automate Your Vulnerability Management

Through Proficio's VLMaaS, you can easily manage the vulnerabilities in your network. Use the power of Proficio to correlate vulnerability scan data, real-time threat intelligence, and zero-day data into one easy-to-understand dashboard display.

Your job is 10x easier with VLMaaS

MEASURE RISK

PRIORITIZE THE RIGHT ACTIONS

TRACK PROGRESS OVER TIME

UNIFIED VIEW OF RISK – FROM CISO TO SEC OPS TO IT OPS

Proficio is a world-class managed security services provider (MSSP) delivering managed detection and response, 24x7 monitoring and alerting, and custom cybersolutions to our clients globally.
